THE AMBITION OF THOSE WHO LOOK FAR AHEAD

The soul of our collections sinks its roots among the waves of the sea, in the harmonious and authentic solitude of boundless spaces, cradled by the sounds of marine life, by its luminous bursts on the surface and those more hidden, immersed in the silent depths of uncontaminated abysses. The spirit of Alphaplate has sailed the seas on luxurious yachts, embellishing walls and supports of elegant environments on crystalline seas and crossing breathtaking HORIZONS, establishing itself over time as a reference point and inspiration in the nautical sector. Journey after journey, what was born to be destined for the sea and prestigious luxury yachts began to be part of a broader dream and an ambitious desire: to explore new SPACES and give new expressions to the exclusivity of a visionary experience. Alphaplate is thus born, from an "Out Of The Switch" intuition in which marine elegance leaves the waves and becomes an integral part of domestic harmony.

MADE IN ITALY

After having lived it, loved it, and understood it, we decided to gather all the experience gained at sea and bring it into the intimacy of domestic environments with collections of control panels that expressed in every detail the Made in Italy, a universally recognized mark of Excellence.
The absolute quality of materials, the artisans who work on them the versatility of in- novative design and daring, yet never arrogant, lines, the re- liability and ro bustness that synthesize tech- nology and cen- turies-old tradi- tion. Creativity. Ours has been a long and rea- so- ned search, ne- ver comple- ted but still evol- ving, which has ventured along the bold yet fa- scinating paths of innovation, in search of a product that would represent a comple tely new tactile sensory experience, with functionality and practicality equal to the emotions it could evoke. We wanted a common object of everyday use to be transformed into a work of design. An exquisitely Italian challen- ge to inspire and intrigue the new generations, ferrying them towards a new stylistic and entrepreneurial sensitivity.

INDEX

An out of the box view and a product that looks far ahead and becomes the beacon of a new idea of luxury

We have dedicated attention to customizing the lines, making them versatile and available in a wide range of finishes and configuration possibilities. Our idea is to give a unique voice to each environment, offering a catalog of options in which to recognize one's own nuances and reproduce them in a daily use product to which we have given new dignity and prestige, effectively elevating it to the status of a functional design object. Our collections are born to give a heartfelt response to a silent request that may have been considered unrealizable until now: to merge practicality, aesthetics, quality, innovation, tradition. An answer that is now here.

THE DELICACY OF A CONCRETE AESTHETIC, THE HARMONIOUS EMBRACE BETWEEN KEYS AND THE STRUCTURE THAT WELCOMES THEM.

The smooth surface and the flush, crescent-shaped keys embellish the softened frame, lending softness to an element that expresses its charm discreetly, with total customization of colors and buttons to make it even more attractive. A refined grace that does not overshadow functionality, with backlighting of the icons sealing a perfect blend of aesthetics and practicality.

PLOTTING TOGETHER THE NEW ROUTES OF DESIGN.

The Yachtica Design & Innovation Prize was established through a close collaboration with the ISIA Institute of Florence during 2019/2020. The goal was to invest in and help the growth of Generation Z designers around the concept of "High Craftsmanship," where the notion of luxury is rooted in refined, high-quality production, often custom and limited-edition. Following meticulous research, the Product Design class presented several interesting proposals, with the winning concept being "Gemma" by Fabiola Pignatelli.

THE UNIQUENESS OF AN INTUITION YOU CAN RECOGNIZE WITH YOUR EYES CLOSED: ALL IT TAKES IS A TOUCH.

The robustness of a product that manages to convey reliability and durability while also exuding delicacy and elegance, adding personality to every space. The soft touch keys make the tactile sensation prominent, transforming an ordinary gesture into a sudden and surprising aesthetic experience. The versatility of extreme customization that includes shapes and colors, ensuring the essence remains unchanged in every combination.

Micro Diamond Surfaces

PRECIOUS

GEOMETRIC FORMS BENT TO THE INSTINCT OF AN INSPIRATION THAT UNITES DISTANT WORLDS.

From the collaboration with Diamond Art comes an innovative and enormously prestigious product that defines a new chapter in luxury. Three hundred customizable holes adorned with micro-diamonds of different colors enrich the surface, transforming it into a canvas of light and reflection. Each piece is certified with carat evaluation and quality of micro-diamonds, for a perfection that surprises.

ALUMINIUM

Aluminum, its chemical symbol (Al.) Given its characteristics, is the most used metal, after iron, for the manufacture of millions of products. One of its greatest advantages are:

INTRO
INDEX
QPLATE
KPLATE
HPLATE
DPLATE
CONTAMINAZIONI
YPLATE67
SOCKET
MATERIALS
FINISHES
TECHNICAL

INDEX

RECYCLABLE

Aluminum can be recycled 100% and countless times without losing its original characteristics that remain unchanged indefinitely, even following numerous recycling phases, that is when the metal acquires the definition of "aluminum from being primary aluminum. recycling ”or“ secondary aluminum ”. Infinitely reusable and 100% recyclable Producing aluminum from scratch has an energy cost of 13 kWh / kg. The production of recycled alum num cuts this cost by 95%.

CORROSION RESISTANCE

Aluminum is a material that immediately oxidizes upon contact with air, creating a protective layer on its surface that makes it particularly resistant to water, wind, and some chemicals. This characteristic makes it the most widely used metal in the transportation, construction, and building industries. It does not require protective coatings, a feature that positively affects the overall weight of the object produced, making it lighter.

DUCTILITY AND MALLEABILITY

Aluminum is easily workable and suitable for undergoing processing processes at both high and low temperatures.

LIGHTNESS

With the same volume, aluminum weighs about 1/3 of copper and steel.

AMAGNETISM

The low magnetizability of the materials used in our products ensures a minimal risk of unwanted magnetic interference.

AESTHETICS

The ease of finishing in various techniques, along with its brightness, makes aluminum the perfect material for such a catalog of a wide range of options.

ANODIZING

Anodization or anodic oxidation, applicable exclusively to aluminum, is a non-spontaneous electrochemical process through which a protective layer is formed over the surface. The technical anodizing treatment of aluminum alloys can be provided with the natural color of the aluminum or colored; it is also requested for its aesthetic qualities, since the visual aspect is a decisive factor that must be preserved overtime. The purpose of the anodizing treatment is to improve the properties of surface hardness, resistance to wear and abrasion and to enhance the aesthetic appearance of the product.

PAINTINGS

The spraying painting is made with highresistance paints and primer treatments for anchoring to the underlying metal material. It is performed in a protected environment to avoid dust and the paint is sprayed directly on the surface to be treated.

GALVANIZATION

Chrome plating, Nickel plating, Bronzing, Gilding Industrial process consisting in covering a metal product with a thin and strongly adherent layer of another metal in order to protect it from corrosion and it is also an effective method for adding elegant metallic finishes to industrial, design and artistic products.
